Dear David

It was delightful to have your answer when I called to place my order last week and my cellciser arrived two days later. My husband was very sceptical when I opened it up but I made him promise to try it for one month to see if he felt any difference. He is pretty active so thought he didn't need it but being diabetic the doctor, of course, wants him to lose weight. Since starting on Saturday his blood sugar readings have been consistently under 100, about 40 points lower than normally seen. Not sure the cellciser was supposed to affect that but we are thrilled. I will let you know at the end of the month if it has remained the same.

As for me, I have had trouble falling asleep for the last 6 or 7 years staying up until at least midnight & sometimes as late as 4am because

Even though I was exhausted as soon
as I would lay down my whole
body would be so alert I couldn't
fall asleep. Since beginning I have
been in bed & quickly fall asleep by
10pm. If nothing else good comes from
this but that I will be thrilled.

Promise to send periodic updates
to let you know our progress.

Thanks for your help
